

HANDLE SANDING MACHINE

SJ handle sanding machines are designed to perform flat grinding in the handles of knives which are already assembled.

The machine is provided with four workpiece holders, which are mounted on a work holding circular plate. Each workpiece holder can support several knives. In each cycle the workpiece holders move beneath the grinding heads, which carry out the grinding step using various types of abrasive grits until perfect finish is achieved.

SJ

	Sanding power	2x5.5
	Sanding maximum length (mm)	150
	Sanding maximum width (mm)	150
	Dimensions of sanding belts	150 x 3000
	Approximate weight (Kg)	1400
